

PREGART Impact

The results of this trial will have huge impact in addressing issues in HIV infected pregnant and breastfeeding mothers.

The overall impact of PREGART would include:

Reduction of the burden of HIV on the health system in low and middle-income countries

Improving HIV/AIDS treatment strategy for pregnant and breastfeeding women

Improved prevention of mother-to-child transmission of HIV during pregnancy and breastfeeding

Academic and Scientific benefits

Clinical trial capacity building in Africa

protecting mother and baby

EDCTP

This Project is part of the EDCTP2 programme supported by the European Union (grant number RIA2017MC-2009)
